

Assignment 2: Daily Standup Simulation

Write a script for a Daily Standup meeting for a development team working on the software feature from Assignment 1. Address a common challenge and incorporate a solution into the communication flow.

Daily Standup Meeting Script

Scrum Master: Good morning everyone, let's get started with our daily standup meeting. Today, we'll go around and each team member will provide a brief update on what they worked on yesterday, what they plan to work on today, and if there are any blockers they're facing. Let's keep it concise to ensure we stay within our time frame.

Frontend Developer : Yesterday, I worked on implementing the UI components for account management, specifically the transaction history feature. Today, I plan to continue working on refining the UI and integrating it with backend functionalities.

Backend Developer : Yesterday, I focused on setting up the backend logic for transferring funds between accounts. Today, I'll be working on integrating the backend with the frontend for this feature.

UI/UX Designer : Yesterday, I completed the wireframes for the bill management module based on user feedback. Today, I'll be refining the designs and creating mockups for the customer support chat feature.

QA Engineer : Yesterday, I conducted thorough testing on the user authentication module and submitted bug reports for the identified issues. Today, I'll continue testing the implemented features and start drafting test cases for the upcoming functionalities.

Scrum Master: Thanks for the updates, team. Let's make sure to keep communication channels open and collaborate closely to overcome any challenge. If anyone encounters any blockers or needs assistance throughout the day, don't hesitate to reach out to the team or me for support. That concludes our standup meeting for today.
